Meet the Stars: Banksia and Grevillea

Among the Proteaceae family, Banksia and Grevillea stand out as two of the most renowned genera. Banksias, renowned for their distinctive "bottlebrush" flowers and woody seed pods, are a symbol of the Australian landscape. Grevilleas, with their vibrant blooms and bird-attracting nectar, add a burst of color to gardens and bushlands alike.

The showy flowers of the Grevillea are a favorite of birds and wildlife.

Exploring the Proteaceae Diversity

Beyond Banksia and Grevillea, Western Australia hosts an astonishing array of other Proteaceae genera. Hakea, with its needle-like leaves and showy flower spikes, adds a touch of elegance to any landscape.

Lambertia, known as "mountain devils," produces fiery-red blooms that ignite the bushland during spring. Dryandra, a low-growing shrub, captivates with its golden flowers and intricate seed pods.

Proteaceae in the Landscape

Proteaceae plants are not only breathtaking to behold, but they also play a vital role in the Australian ecosystem. Their flowers provide a vital food source for native birds, insects, and mammals. The seed pods of many Proteaceae species are adapted to survive bushfires, ensuring their survival even in the harshest conditions.

Proteaceae plants add beauty and ecological value to gardens and landscapes.
