The book begins with Jobs's early life and education. Jobs was born in San Francisco in 1955 and adopted by a working-class couple. He showed an early interest in electronics and computers, and at the age of 12, he built his first computer. After dropping out of college, Jobs co-founded Apple Inc. with Steve Wozniak in 1976.

Apple's early products were personal computers, and the company quickly became a leader in the industry. However, Jobs was always looking for new ways to innovate, and in 2001, he launched the iPod, a portable music player that would revolutionize the way we listen to music. The iPod was followed by the iPhone in 2007 and the iPad in 2010. These products were all huge successes, and they helped to make Apple one of the most valuable companies in the world.

Jobs was a demanding and sometimes difficult boss, but he was also a brilliant leader who inspired his employees to achieve great things. He was also a master of marketing, and he was able to create a cult-like following for Apple products. Jobs died in 2011 from pancreatic cancer, but his legacy lives on. He was one of the most important figures in the development of the personal computer, and his products have had a profound impact on the way we live and work.
